Summary

Pass · Moderate · Warning · Skipped

- Max. Animations **27.9 ms** *(Warning limit exceeded: > 16.67 ms)*
- Avg. FPS **6** *(Warning limit exceeded: < 30)*
- Total Janks **326.0** *(Warning limit exceeded: > 50)*
- Max. Layout Measure Time **57.9 ms** *(Warning limit exceeded: > 16.67 ms)*
- Avg. Device Memory **2407.7 MB** *(Moderate limit exceeded: > 2000 MB)*
- Avg. Energy Score **466.9 pts** *(Moderate limit exceeded: > 250 pts)*
- Pass

Avg. App CPU: 57.7 %

Max. App CPU: 80.0 %

Avg. App Memory: 96.8 MB

Max. App Memory: 125.0 MB

App Size: 38.3 MB

Crashes: 0

Avg. Device CPU: 300.6 %

Max. Device CPU: 386.0 %

Max. Device Memory: 2447.7 MB

Max. Draw Time: -0.2 ms

Max. Input Events: 0.3 ms

Max. SQLite Performed Query: 1.0 ms

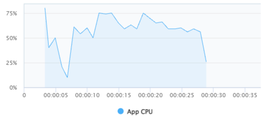
Total Network Download: 2.8 MB

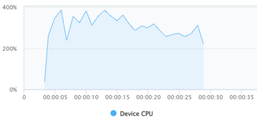
Total Network Upload: 0.0 MB

Metrics

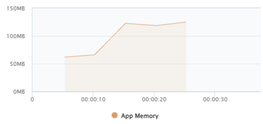
CPU

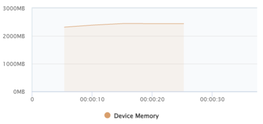
Starting from **Apptim Desktop v1.6.9**, the CPU usage metric values will now take into account multi-core CPUs.
Explanation: Modern CPUs often have multiple cores, which allow them to execute multiple tasks simultaneously. Each core can handle its own workload independently. As of now, when monitoring CPU usage you might encounter CPU percentages that appear to exceed 100%. This indicates that the total CPU utilization across all cores is higher than the capacity of a single core.



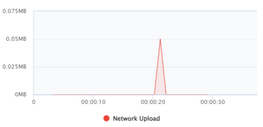


Memory





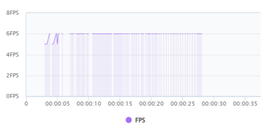
Network



Render

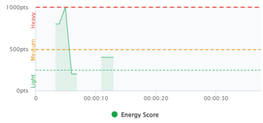
For more information about how to understand this data, definitions and your goals as an App Developer read more here.

Insights during the test (not critical)
- Sync Time: The RenderThread was busy working on a different frame. This is used internally to differentiate between the frame that is doing too much work and exceeds the 16ms limit, and the frame that is lagging due to the previous frame exceeding the 16ms limit.
- Sync Start Draw Commands: A lot of new Bitmaps were drawn which must be uploaded to the GPU. To understand more about the sync phase, check out the Profile GPU Rendering video.
- Animations took more than 2ms, check if your app wrote any custom animations or what fields ObjectAnimators are animating, and make sure they are suitable for an animation.
- Vsync difference: The UI thread was busy, which prevented it from responding to the vsync signal in a timely manner.



Energy

Apptim profiles the use of the CPU and GPS sensor, and it displays a visualization of how much energy each of these components uses. This Energy Score also shows you occurrences of system events (wake locks, alarms, jobs, and location requests) that can affect energy consumption. Read more about how this works here.



Test Environment

sdk_gphone64_x86_64

Android version:	13
Manufacturer:	Google
Model:	sdk_gphone64_x86_64
CPU:	ranchu
CPU Arch:	x86_64
CPU Cores:	1
RAM:	4GB

App Information

Name:	None
Version:	None
Package Name:	org.wikipedia
Launch Activity:	None
Use large heap:	Yes
Debuggable:	Yes

Screen Information

Screen orientation:	port
Screen resolution:	1440x3040
Layout size:	Normal
Display density:	120dpi (ldpi)
LOpenGL ES:	196609

Apptim Environment

Host Os:	Windows
Host Arch:	64bit
Host Id:	26acf25c5326150bcd2fed0686ca1d10cf23fd068bd17d27527d3
Apptim Agent Version:	0.17.0

App Compatibility

Min API Level:	Undefined
Target API Level:	Undefined
Native CPU architectures:	No
Screens:	
Support Any Density:	None
